Yushan Dismitha Hettiarachchi

Undergraduate

+94 76 749 2276 yushanhettiarachchi639@gmail.com LinkedIn Github Portfolio

Profile

Computer Science undergraduate with hands-on experience in backend development and AI-powered application development using Java, Spring Boot, Python, and FastAPI. Skilled in REST API development, database integration, and LLM-based solutions, with project experience in AI-driven learning platforms and task management systems. Interested in building scalable backend systems and integrating AI technologies to solve real-world problems.

Education

BSc (Hons) Special Degree in Computer Science (GPA-3.60)
University of Ruhuna
15/08/2021 - up to date

Full-stack Master Development Program (Diploma)
Developer Stack
04/01/2025-05/01/2026

Advanced Level (1-A, 2-C)
D.S Senanayake Collage, Colombo
01/01/2018 – 15/11/2020

Projects

Thaksalawa-AI - Group Project
LMS for school students, integrated with AI model. Quiz generation and marking using AI model, Chat-bot integrated to answer from the provided PDF. Flash-cards available for each lesson in the textbook. Finaly the analysis of each student performance where teachers can have good idea about their students. Technologies using – python (Fast API) , Langchain(RAG), Milvus, React (Frontend).

Infocure website – Group Project
Developed a full-stack Spring-boot web application, with an admin dashboard for photo progress management and event handling and client side dashboard for event bookings. Frontend on Vercel (web hosting) using GitHub. Containerized backend on Render.

RIUSS – Group Project
As the Frontend Developer for the Ruhuna International Undergraduate Science Symposium (RIUSS 2025), I designed and implemented a professional academic platform for the University of Ruhuna. I focused on creating a high-performance, responsive interface that serves as the central information hub for global researchers and students. The project required rigorous attention to detail—ensuring accessibility across all devices, managing complex scheduling layouts, and maintaining a visual identity aligned with university standards.

CRAG-Corrective Retrieval-Augmented Generation - Individual Project
Developed a Python-based question-answering application with a FastAPI backend and Streamlit frontend. Implemented a LangGraph workflow that retrieves and evaluates document relevance, rewrites queries when necessary, performs web searches using Tavily, and generates context aware responses through an LLM. Integrated ChromaDB and Hugging Face embeddings for PDF document storage and semantic retrieval.

Projects

SmartTask – Individual Project
SmartTask is a task management platform with AI-powered features designed to improve productivity, organization, and workflow efficiency. Built using JavaScript, Java, CSS, Python, and HTML, with a spring-boot backend, FastAPI ai service and a react frontend. The project combines a modern user experience with intelligent task planning and management capabilities to streamline daily work and collaboration.

Volunteering

AIESECER in University of Ruhuna
Manager - Outgoing Global Volunteer (OGV CXP)
01/02/2023 - 31/07/2025

Other Qualifications

Participated in Road to Insurgex 1.0 Hackathon
(Organized by CSSC University of Ruhuna)

Assured Diploma in English (DIE)
June - 2022

Skills

- **Programming Languages:** Java / Python / JavaScript / C
- **Databases**: Mysql, Mongodb
- **Opereating Systems:** Windows, Linux
- **Frontend Development:** React, NextJs, Flutter
- **Backend Development:** Spring Boot, FastAPI
- **AI & Data Engineering:** Langhcain, RAG, Milvus, LLMs, Prompt Engineering, Vector Database
